

THE MOST DANGEROUS PART OF A HURRICANE ISN'T THE WIND OR THE SURGE. IT'S A PRESIDENT WHO FAILS TO ACT ON CLIMATE CHANGE.

As millions of Americans struggle to put their lives back together after two of the most devastating storms in history, one thing should be clear to all of us: we are making hurricanes stronger. As oceans warm from pollution, storms gain power. Rain increases from warmer air evaporating more moisture. Seas rise from melting ice and storm surges rise with them.

This is science.

Yet our President dismisses America's role in making the weather more violent, virtually assuring there will be more pain to come. By deriding climate change as a hoax, pulling out of the Paris Agreement, and promoting coal and oil, President Trump is threatening the lives, homes and security of millions of Americans.
